PROJECT STOP

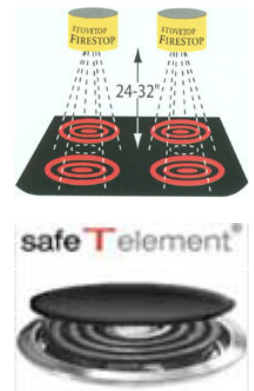

FEDERAL GRANT: EMW-2009-FP-02581

On August 7, 2009, the Sandy Springs Fire Rescue Department received a \$38,000 federal grant to launch a program to encourage fire safety. The grant will help start Project STOP, which is aimed at reducing cooking fires in rental properties. The grant covers information prevention and safety education through visits to seniors and children in the city.

The cornerstone of Project STOP will be anchored in educating at-risk seniors and children on reducing the occurrence of cooking fires and the necessary action steps in lieu of a fire. To schedule a free presentation on Cooking Fire Safety by the Sandy Springs Fire Department, contact Captain Mark Ware at 770 730-5600.

The funds will be spent on these two new technologies that were developed to address unattended cooking fires:

- Stove Top Fire STOP is a 12-ounce automatic fire extinguisher that attaches magnetically under the vent hood over a stovetop. When a stovetop fire occurs and the flame reaches the Stove Top Fire Stop, the fire suppressing powder is automatically released onto the fire.
- Safe-T-Element is a technology won't allow common combustibles to ignite and burn on the stovetop. An electric element on a typical electric range will heat to about 1300-1600 degrees F; common combustibles generally ignite and burn at about 700 F. A temperature control device that prevents the element from reaching these temperatures eliminates all stovetop fires, including cooking oil fires.

In early July 2010, the City will begin installing these two devices in two pilot projects. To be eligible in this offer, you must have a child that lives in your residence that is 14 years or younger. If you are interested in receiving these *free of charge*, please return this flyer in the rent collection box no later than June 30, 2010. In the event there are more than 120 people interested, a lottery will be held on July 1, 2010. Should you have any questions, please call Captain Mark Ware at 404-656-5600.
