

StoveTop FireStop Venthood®: A Fireman in a Can

StoveTop FireStop® automatic fire suppressors are the first line of defense against stovetop fires, recommended by fire chiefs and fire prevention experts. StoveTop FireStop Venthood is inexpensive, invisible, and invaluable.

Cooking fires remain the number one cause of residential structure fires, with unattended cooking cited as the leading cause of these fires.

With StoveTop FireStop, customers report an average of 99% reduction in fire claim costs.

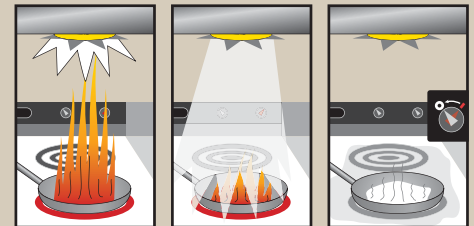

How does StoveTop FireStop work?

A 12-ounce automatic fire suppressor, StoveTop FireStop Venthood

- ▶ Releases fire-suppressing powder automatically when flame activated
- ▶ Delivers powder to both front and back burners
- ▶ Alerts residents with a short “pop” sound

How it Works

How do I install StoveTop FireStop?

StoveTop FireStop Venthood attaches under the vent hood (requires 27-35 inches between the burner to the bottom of the surface where the magnet will attach). To install:

1. Attach the ring to the magnet and to the top of the StoveTop FireStop canister.
2. Center one canister between the front and back burner on one side of the stove.
3. Lift canister straight up and attach.
4. Repeat steps 1-3 for the second canister on the other side of the stove.

Installation
